It is a regional problem, not a nationwide one

Veridi Logistics · Last Mile Delivery Audit · 96,470 delivered orders, Olist data

Veridi is not broadly late; a few regions are failing

6.8%

of delivered orders arrive after the promised date

12 days

typical order arrives EARLY: estimates are conservative on average

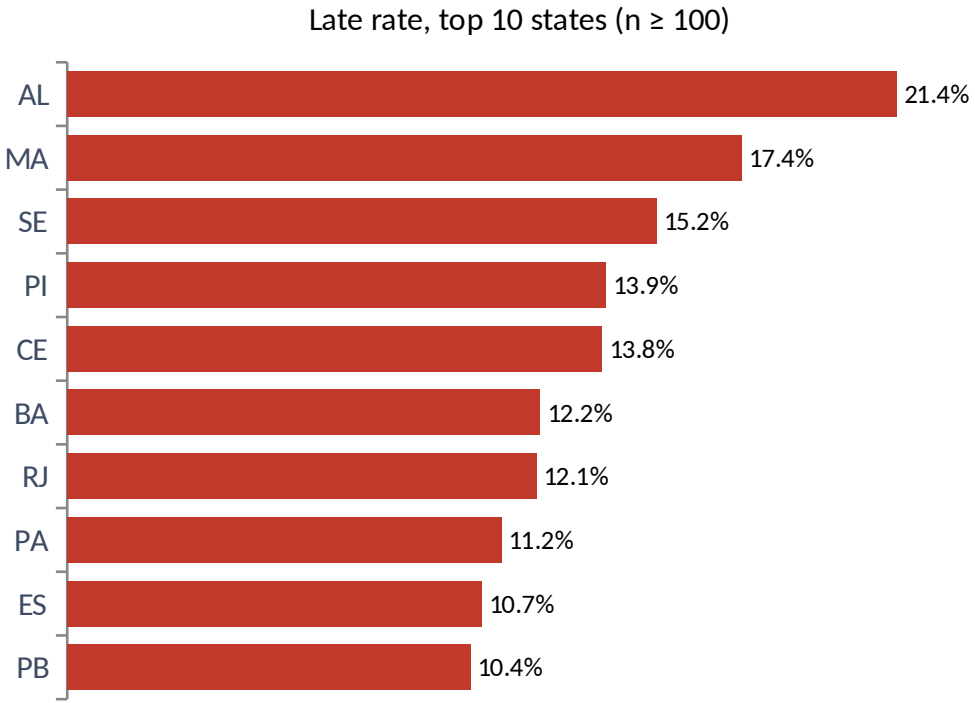

17.6%

of all late orders come from the Northeast, which is only 9.4% of volume

4.3 → 1.7

average review: on-time vs super-late orders

The Northeast and Rio de Janeiro miss the promise most often

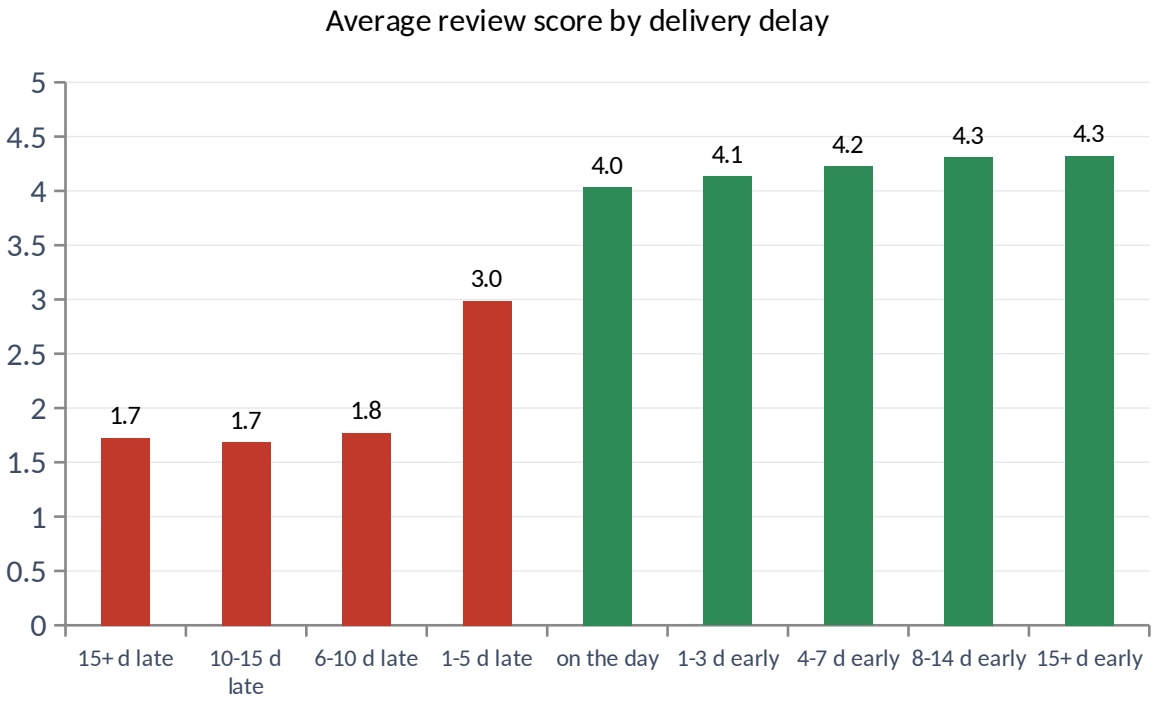

Northeast: AL 21%, MA 17%, SE 15%; PI, CE and BA also run well above the 6.8% national rate.

Rio de Janeiro: 12% late; 13% of volume but 23% of all late orders. The biggest single fix.

Remote is not worst: far-North states are promised 40+ days; distance explains little (ρ = +0.25).

Late delivery is what breaks the review score

4.3 → 3.0 → 1.7

on time → late → super late

The drop is a cliff the day the promise is broken, not a gradual slide.

On-time orders score 4.2+ in every region, so this is logistics, not unhappy regions.

Candidate’s choice: recalibrate the ETA, state by state

State	Promised	Actual	% late	Add days	New promise
AL	33	25	21%	+13	46
MA	31	22	17%	+13	44
CE	32	21	14%	+13	45
SE	32	22	15%	+12	44
RJ	27	15	12%	+12	39
PA	38	24	11%	+10	48

Stable states (SP, MG, PR, RO, AM) carry 11–20 days of cushion: room to promise faster.

Why it matters

Turns the diagnosis into a one-line fix per state: add N days and ~95% of parcels arrive on time.

Where the time goes

Late orders lose ~20 extra days in carrier transit vs ~3 in seller handling: a carrier problem first.

Bonus: Furniture is only slightly harder to ship than Electronics

Group	Orders	% late	Expected*	Avg days	Review
Electronics	13,898	**6.9%**	7.0%	13.0	4.08
Everything else	74,339	**6.7%**	6.7%	12.2	4.19
Furniture	8,233	**7.3%**	6.8%	14.2	4.01

**Late rate if the group shipped like the average order to the same states.*

Category is second-order
Categories range ~4% to ~12% late; states range ~3% to ~21%.

Furniture
7.3% vs 6.9% for electronics, ~1 extra day door to door; weight is not the driver (ρ = +0.09).

Watch
Audio runs 11.9% late (small sample, 344 orders).

What Veridi should do next

1

Reset ETAs

Add 12–13 days in AL, MA, CE, SE and RJ; pilot, then roll out to all Northeast states.

2

Fix the carrier leg

Renegotiate or add carriers in the Northeast and Rio; transit is 20 days slower on late orders.

3

Plan for peaks

Late rate hit 19% in Mar 2018 and 12% in Nov 2017: add capacity and padding before peaks.
